Public access Private access Connectivity

### Public network access

Public Endpoints allow access to this resource through the internet using a public IP address. An application or resource that is granted access with the following network rules still requires proper authorization to access this resource. [Learn more](#)

Public network access

☐ Disable

☒ Selected networks

☐ Connections from the IP addresses configured in the Firewall rules section below will have access to this database. By default, no public IP addresses are allowed. [Learn more](#)

### Virtual networks

Allow virtual networks to connect to your resource using service endpoints. [Learn more](#)

+ Add a virtual network rule

| Rule | Virtual network | Subnet | Address range | Endpoint status | Resource group | Subscription | State |
|------|-----------------|--------|---------------|-----------------|----------------|--------------|-------|
|------|-----------------|--------|---------------|-----------------|----------------|--------------|-------|

### Firewall rules

Allow certain public internet IP addresses to access your resource. [Learn more](#)

+ Add your client IPv4 address (115.244.89.214) + Add a firewall rule

| Rule name | Start IPv4 address | End IPv4 address |
|-----------|--------------------|------------------|
|-----------|--------------------|------------------|

|                                    |                |                |
|------------------------------------|----------------|----------------|
| ClientIPAddress_2026-4-13_15-51-16 | 115.244.89.214 | 115.244.89.214 |
|------------------------------------|----------------|----------------|

### Exceptions

☒ Allow Azure services and resources to access this server

Send us your feedback

You are now in the production slot, which is not recommended for setting up CI/CD. [Learn more](#)

Deploy and build code from your preferred source and build provider. [Learn more](#)

Source \*

GitHub

Building with GitHub Actions

Change provider

GitHub

App Service will place a GitHub Actions workflow in your chosen repository to build and deploy your app whenever there is a commit on the chosen branch. If you can't find an organization or repository, you may need to enable additional permissions on GitHub. You must have write access to your chosen GitHub repository to deploy with GitHub Actions.
