

Day87-01-Azure CosmosDb

1. Choose Azure DocumentDB

Home > Azure Cosmos DB

Create an Azure Cosmos DB account

Which API best suits your workload?

Azure Cosmos DB is a fully managed NoSQL and relational database service for building scalable, high performance applications. [Learn more](#)

To start, select an API to create a new account. The API selection cannot be changed after account creation. To use multiple APIs, you can create separate accounts with different APIs as needed.

Recommended APIs Other APIs

Azure Cosmos DB for NoSQL

Azure Cosmos DB's core, or native API for working with documents. Supports fast, flexible development with familiar SQL query language and client libraries for .NET, JavaScript, Python, and Java.

[Create](#) [Learn more](#)

Azure DocumentDB (with MongoDB compatibility)

Fully managed document database service with full MongoDB compatibility. Migrate your existing MongoDB databases to DocumentDB and achieve >40% savings. Create new apps that need complex queries or faster AI search.

2. Choose Request Unit(RU) database account

Home > Azure Cosmos DB > Create an Azure Cosmos DB account

Choose Architecture

Which type of resource?

Azure DocumentDB (with MongoDB Compatibility) is designed for modern workloads, AI/Vector search, and cost efficiency. Cosmos DB for MongoDB supports request unit (RU) accounts for specialized use cases. Not sure which to choose? [See why most users pick Azure DocumentDB.](#)

Note: Once a resource is created, your choice cannot be changed.

Recommended: Azure DocumentDB

- Vector search + GenAI support
- Cost-efficient scaling model
- Open-source engine [Learn more](#)
- Designed for multi-cloud and hybrid cloud solutions
- [See documentation and supported features](#)

[Create](#)

Request unit (RU) database account

- Designed for point-reads and simple queries
- Instant, granular autoscaling
- Multi-region writes
- Limited for analytics and AI workloads
- [See documentation and supported features](#)

[Create](#)

3.

Create Azure Cosmos DB Account - Azure Cosmos DB for MongoDB

✔ Validation Success	
Basics	
Subscription	Azure subscription 1
Resource Group	(new) rg1
Location	Central India
Account Name	(new) cosmosdbks
API	Azure Cosmos DB for MongoDB
Capacity mode	Serverless
Availability Zones	Disable
Backup Policy	
Backup policy	Periodic
Backup storage redundancy	Geo-redundant backup storage
Security	
Data Encryption	Service Managed
Networking	
Connectivity method	All networks
