

## Assignment: Provisioning and Accessing an Azure Windows VM:

### Part 1: Creating Virtual Machine and Resource Group.

#### Resource Group-

### Create a resource group

BasicsTagsReview + create

**Resource group** - A container that holds related resources for an Azure solution. The resource group can include all the resources for the solution, or only those resources that you want to manage as a group. You decide how you want to allocate resources to resource groups based on what makes the most sense for your organization. [Learn more](#)

**Virtual machine**

Best for lower-traffic workloads, testing, or to control or highly customize apps, OS, or file system. If your workload or traffic starts to grow, a VM can later be attached to a Virtual Machine Scale Set (VMSS).

**Virtual machine scale set (VMSS)**

Built-in scaling, performance optimization, load balancing, and batch management for 1 to 1,000 VMs (no added cost). Include multiple VM sizes, zones, regions, and domains, along with discounted Spot VMs.

**Presets**

Create a pre-configured VM designed to optimize memory, capacity, or for general use. Deploy as-is, or customize as needed.

**Hybrid, preconfigured, and high volume solutions**

Explore pre-configured Starter kits for Linux and
